Re: Water Control Valve Installation at Daeshin

On December 2012, Accend Energy was hired by Daeshin USA to install Water Control Valve (Water Pressure Regulator) on the main water supply stem, 6" diameter pipe that handles all the incoming water to the manufacturing facility.

We have, since installation, read the meter reading on a regular basis to validate the saving and after six months of evaluation, we are happy to inform you that we have actually saved 8% ~ 9% on the water bill, both incoming and sewer charges.

As a company that averages about $65,000 water bill per month, 8% ~ 9% saving equates to be $5,200 ~ $5,850 saving per month and when annualized, $62,400 ~ $70,200 of saving per year. Based on our initial investment on the installation, this is only 4 MONTH ROI and I am extremely satisfied with the result. With the continuous increase in water bill, I anticipate the saving of $624,000~ $702,000 during the life expectancy of your Water Control Valve.

The decision to purchase and install your Water Control Valve has been proven to be the wisest one to save our ever increasing water bill and I would definitely recommend your Water Control Valve to anyone who wants to reduce their water bill.

Best Regards

Justin (Jae-Won) Lee
